SUBJECT: MARTIN® Railcar Opener

The MARTIN® Railcar Opener has been redesigned to offer better mobility while still using the same adjustable height features. This new design replaces the stationary wheels with a pivoting system that will allow sideways travel while the gate opens. After the Railcar Opener is in place, one lever is moved to rotate the front wheels 90 degrees for the lateral travel. This mobility feature will open new opportunities for applications previously missed by the stationary wheel design.

A new pneumatic control system replaces the push button style with a single solenoid, mounted next to the hand grips. With the new Railcar Opener the FRL will be permanently mounted in a remote location for the air supply.

The new part number 38475 will replace the current Railcar Opener 36416.

NEW PART NO.	DESCRIPTION	LIST PRICE
38475	Railcar Opener assembly with pivoting wheels	\$7500.00

PART NO. TO BE OBSOLETE	DESCRIPTION	LIST PRICE
36416	Adjustable Height Railcar Opener	\$6898.00
