

MARTIN® E-Z™ Auto Scoop Filling System

Tired of scooping or hand filling?

Concerned about repetitive motion injuries? Want to increase your number of containers per hour? If so, the MARTIN® E-Z Auto Scoop Filling System is for you! Place your container on the scale and step on the foot switch. In seconds, your product will be dispensed fast and accurate.

Custom Hopper/Feeder Sizes & Configurations Available

Problem: A chemical supplier was experiencing high labor costs when filling containers by hand. The operator positioned 1 & 1.5-pound containers on a scale and scooped material into the containers, by hand, until the weight was reached.

Solution: A special MARTIN® E-Z™ Weigh System was developed. The operator now places the containers on the scale and pushes a foot switch. The scale logic tares the scale to zero and then activates the MARTIN® E-Z™ Feeder. When the scale is satisfied the feeder is stopped and the operator removes the filled container.

Result: Labor costs are reduced by 50%, spillage is greatly reduced as is the overfill of the containers.

FEATURES

Developed Specifically For Short Runs

Gourmet food manufacturers, re-packers, coffee and spice sellers, chemical packagers and other packing professionals will find that E-Z Auto Scoop Filling System meets the needs for capacities up to 750 fills per hour.

Cleaning Is A Snap

The live storage hoppers (capacities from .9 – 4.1 cu.ft.) lift off with no fasteners to remove. The entire assembly is fabricated from electro-polished 304 SS.

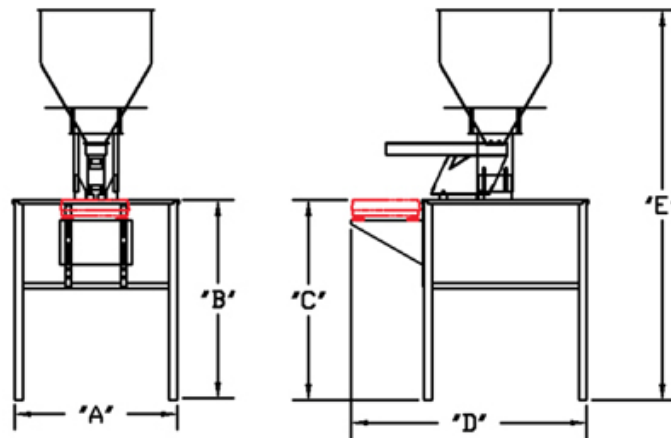

Reliable, Easy To Operate Controls

Change the target weight in seconds. No proprietary software. Worldwide service network.
