

MARTIN® VAC-MOUNT™ Portable Vibrators

Instant vibration! No welding! No downtime!

MARTIN® VAC-MOUNT™ Portable Vibrators are the answer for applications where ease of installation and/or maximum portability is required. The mounts are held in place by vacuum generated by a venturi system. Just place the unit against the vessel, turn the suction valve handle and you are ready to vibrate. This is the ideal solution for intermittent flow problems or for cleaning between batches. MARTIN® VAC-MOUNT™ Vibrators are the perfect tools for troubleshooting material-flow problems.

MARTIN® VAC-MOUNT™ Portable Vibrators are available in a variety of sizes including impacting, non-impacting and high-frequency models.

FEATURES

Easy To Use

Lightweight units provide “one worker” portability. The largest, most powerful unit weighs less than 37 lbs. All the controls required to operate the vibrator and mount are included.

Eliminates Guesswork

The vacuum mount helps pinpoint the best position for the placement of permanent vibrator installations.

Vibrates Portable Hoppers

Locate MARTIN® VAC-MOUNT™ assemblies at unloading stations. Instant attachment and controlled vibration eliminates destructive and expensive hammering.

Removes Residue Quickly

Attach a unit between batches to quickly and efficiently remove residue, reducing product waste and labor.
